

The industry leader for

ENVIRONMENTAL CARE

Industry leader in planters – even when it comes to environmental protection!

ISO 14001 Certification

The world's toughest certification process requiring the certified producer to have an environmental manual, adherence to which is regularly controlled. Our last control was in 2017.

ISO 14001 defines the requirements of an environmental management structure and assists a company to develop their objectives and strategy within legal and important environmental parameters.

2. ISO 50001 Certification

Scheurich's energy management according to ISO 50001 shows their commitment to continuous improvement of energy use by means of systematic monitoring of energy consumption across the enterprise. This permanently reduces energy costs and leads to a sustainable decrease of CO₂ emissions.

3. Ecoprofit Certification

Certification of the combination of environmental responsibility and economic management, focusing on the optimal use of raw materials, energy consumption and emissions in the manufacturing process. Scheurich's first certification was in 2002.

4. Climate Certification

Recycling is a critical element to assist reduce greenhouse gas and plays a decisive role in climate protection. Our participation in the recycling program for product packaging saved the equivalent of 931 Kilograms CO₂. This is the same emission as a car produces in 6.951 kilometers.

1. Material selection

We set value on a stringent selection of materials used in our production process.

2. Clean production

Continuous investment of significant capital in machinery to ensure the environmental aspect of our production process is always the top priority. Examples range from recycling heat from our kilns to dry pottery prior to firing; modern filter systems for water; energy saving kilns and 100% use of clay through complex recycling system usage. All products are decorated without the use of solvents or heavy metals (e.g. lead).

3. Optimized packaging

Avoiding the use of wasteful complete carton packaging, that only increases the volume of waste in the world and the cost of labour to unpack it, Scheurich have strengthened their product to avoid chipping in transport. This allows us to use minimal packaging for transport.

4. CO₂-reduction – transportation

Located in central Europe we have software management systems that optimise the supply of our product to customers throughout this core market area.

We avoid the higher CO₂ footprint for product coming from Asia and can adapt to trends and market needs quicker.

5. Eco-conscious energy management

Our new solar power unit was installed in June 2010. In December 2012 we installed a natural gas cogeneration plant. This provides electricity and heating for our production area. We are now saving annually 219 tonnes CO₂ as a result.

RESPONSIBILITY

for customers, employees,
environment & society

Scheurich is acting responsibly for 90 years. For decades, we provide professional training to trainees so that we always have a highly qualified workforce. The average tenure is 17 years - all know-how for the benefit of our customers.

We are leader in environmental protection:
As ceramic manufacturer Scheurich is certified ISO-14001, ISO-50001 and Ecoprofit.
Last but not least, we bear responsibility for the success of our customers: with innovative top selling products and promotional concepts.
We ensure your success!

Scheurich – the partner for everyone who cares about the environment.
